

CASE STUDY

SURELINE SYSTEMS SUREedge® MIGRATOR USED BY SHIRE OF DARDANUP TO MIGRATE WORKLOADS TO NUTANIX ENTERPRISE CLOUD

BUSINESS CHALLENGE

The Shire of Dardanup was an early adopter of open source server virtualization based on legacy infrastructure. This traditional server/storage implementation provided a very reliable and cost effective solution for them. The challenge arose after an implementation of a new SharePoint farm, which caused some serious performance issues. On top of that, their current enterprise storage solution was about to reach its end of support. The Shire decided to purchase the Nutanix Enterprise Cloud Platform to replace their existing enterprise Server / Storage infrastructure. As part of the implementation, they needed to migrate their environment to Nutanix, including moving over to AHV (Nutanix native hypervisor).

BACKGROUND

The Shire of Dardanup is a medium-sized local government based in Western Australia, 115 miles south of Perth and covers 200 square miles. The Shire of Dardanup is a combination of rural and fastgrowing urban areas, with a population of approximately 10,000 residents. The governing executives and chancellors are focused on encouraging balanced growth and development, while recognizing the diverse need of each unique community within its boundaries.

The Sureline Team from initial contact through to the finished project have been amazing, and their support has been first class."

- Stephen Eaton

IT Manager,
Shire of Dardanup

THE SOLUTION

The Shire of Dardanup wanted a migration solution that would be easy to implement and provide management of the overall migration process, allowing for a staged approach. They had looked at a number of migration solutions as well as Backup and DR products, but they either did not support both hypervisors or were slow, unreliable and time consuming.

The Shire of Dardanup decided to engage with Sureline Systems after hearing of other Nutanix customers who had successfully used Sureline's SUREedge Migrator to perform migration projects to Nutanix with AHV and other hypervisors. The Shire of Dardanup was able to install SUREedge Migrator utilizing remote support and meet the criteria for a successful project.

RESULT

Shire of Dardanup was able to migrate all of their virtual servers seamlessly to the Nutanix platform with AHV using SUREedge Migrator.

"Sureline has been a pleasure to deal with. Their support staff, and their knowledgeable technical team, have been very helpful. Any technical issues were immediately resolved, with a follow-up contact to make sure things have been resolved," said Stephen Eaton, IT Manager, Shire of Dardanup.

ABOUT SURELINE SYSTEMS

Sureline offers a secure, flexible and efficient enterprise-class applications mobility solution for cloud migration and disaster recovery that is hardware, hypervisor and cloud agnostic. SUREedge technology automates transformations and recovery for any virtual, cloud, physical, or containerized application and server, delivering application mobility at the push of a button.

HIGHLIGHTS

- SUREedge Migrator works from any hypervisor to any hypervisor
- Sureline solutions are easy to use and manage
- The Sureline team of experts are knowledgeable and service oriented
- The Sureline solution succeeded where others could not
