Sureline™

UNLOCKING APPLICATIONS

Application mobility that is secure, reliable and efficient is key to enabling transition to the cloud, new infrastructure and other transformative architectures. With Sureline Systems, IT managers can safely and quickly move all applications, operating systems, licenses, IP addresses, data, etc. from any platform to any new platform, whether local or remote. Even migrating back from the cloud is simple. Coupled with advanced disaster recovery (DR), Sureline offers low-risk, high-value IT investment protection.

Sureline's **SUREedge®** suite of migration and DR software solutions deliver application mobility with the quickest time to production and the least operational disruption. Protect valuable IT investment and eliminate unnecessary downtime by seamlessly migrating:

- To and from dissimilar virtual or container environments, clouds, or physical servers, whether local or remote
- Using automated transformations that allow applications to run in a new, and often different, target environment

TECHNICAL OVERVIEW

SUREedge technology ensures data is not compromised, while optimizing the use of available bandwidth. Unique capabilities of **SUREedge** include:

- Agentless architecture
- WAN throttling algorithms
- Ultra-bandwidth friendly, deduplicated and compressed data replication
- Zero data loss recovery points
- Instant and automatic failover

UNLOCK YOUR APPLICATIONS

- Any System; Virtual, Container, Cloud or Physical
- Automatically Transform to Any Destination
- Including Migrate from Cloud to On-prem

FASTEST TIME TO PRODUCTION

- Fast and Simple Installation
- Agentless Deployment
- Ultra-Bandwidth Friendly Data Transfer
- Automated Transformation without Manual Intervention

ZERO BUTTON MIGRATION

- Scheduled Migration
- Unattended Migration
- Easy Scaling to Thousands of Servers
- Scales to PB of Data

RISK MITIGATION

- Single Connection Between Sites
- No Firewall Changes or Exposure
- Deduplicated, Compressed and Encrypted Data

SOLUTIONS

SUREedge® is a proven, flexible, enterprise-class applications mobility solution for cloud migration and disaster recovery that is hardware, hypervisor and cloud agnostic.

MIGRATION TO CLOUD

Migration to cloud or hyperconverged infrastructure should not be hampered by requirements of system compatibility. **SUREedge** provides the ability to transform a virtual, container, or physical system to a compatible form in the cloud, with zero data loss.

Recovery Planner and Recovery Simulator provide the ability to test cloud migration plans in the sandbox and assure the process will work with no disruption to business workloads.

DISASTER RECOVERY

Protect business-critical applications on any virtual, container, or physical server with **SUREedge** DR to any cloud or to a remote site. The solution includes Recovery Planner™ to automate and execute all the steps involved in bringing up, failing over to a DR site, and eventually failing back to original site while enforcing required SLA policies. DR Plans can be executed manually or automatically, and can be run in sandbox to ensure confidence without impacting the production operation or actually switching operations over to the DR site.

AVAILABILITY

Sureline is a partner-focused organization with solutions available through:

- Cloud Partners
- System Integrators
- Hyper-converged Infrastructure Partners
- Value Added Resellers
